

## Introducing the HSCM Public InsurTech Index (HPIX)<sup>™</sup>

*The term “InsurTech” was only coined [around 2015](#), but the new wave of tech-enabled insurance-sector companies already represents over \$65 billion of market cap – just among companies who have gone public in the last 10 years.*

*With nearly two dozen such companies having completed or announced public offerings in the past decade, Hudson Structured Capital Management Ltd (HSCM) has created the HSCM Public InsurTech Index<sup>™</sup> (HPIX) to measure the sector’s performance in public markets. We believe this is the first and only index of its kind available to the public.*

### Methodology and Components

The HSCM Public InsurTech Index (HPIX) intends to track the price movements of a portfolio of common equity securities listed in the last 10 years by companies in the United States insurance sector with novel business models differentiated by technology.

The HPIX was created and is administered by HSCM and is calculated by Solactive AG, an index calculation agent. The HPIX is available [online](#), on Bloomberg as ticker HPIX INDEX, and on Reuters Instrument Code .HPIX.

The components of the HPIX, currently 18 companies, describe themselves as having novel business models differentiated by technology. Self-descriptions by companies are taken at face value in constructing the Index. The index components also meet certain criteria, defined in the [Index Guideline](#), around minimum size, length of public listing, geography (US only) and certain other aspects of the business model. The HPIX should not be seen as a definitive list, nor an endorsement of companies that are included.

The HPIX is weighted by total market capitalization. Each company’s weight is capped at 15%. The caps affected several companies last year when the Index had fewer components. The IPOs and SPAC mergers since 1/1/2020 resulted in several components being added.

The Index is rebalanced quarterly as shown on the next page. New components can be added at the beginning of each quarter, and components can be removed as described in the Guideline. Blank cells typically indicate that the component’s shares were not yet publicly traded.

Component	Ticker	Total Market Cap		Weights					
		4/1/2021 \$M	1/1/2020	4/1/2020	7/1/2020	10/1/2020	1/1/2021	4/1/2021	
<b>Carriers</b>		\$ 31,468	53%	53%	45%	38%	44%	48%	
Clover Health Inv. Corp	CLOV	\$ 1,073						1.6%

<b>TOTAL</b>		\$ 65,639	100%	100%	100%	100%	100%	100%	

### HSCM Public InsurTech Index values

The HPIX as of market close on April 27, 2021 is shown here. (For the latest, see [here](#).) The HPIX started with an initial value of 100 on the first trading day of 2020 and was at 161 on April 27, 2021.

The index values rose nearly 75% in 2020 with a Sharpe Ratio of nearly 172%, reflecting a strong year for InsurTech. The Index peaked this year on February 12<sup>th</sup> at 203. A [conventional definition](#) of a “bear market” is a sustained 20% decline from the peak. A 20% decline from the peak is an Index value of 163. The HPIX has been mostly below 163 since March 4<sup>th</sup>. The declines in late February and March of this year followed last year’s 75% increase in the Index value. (Of course, past performance is not a guarantee of future results.)

For context, we compare the HPIX against the Solactive United States Technology 100 Index (“Tech 100”) ([index guideline here](#)), which tracks the performance of the 100 largest companies traded on Nasdaq. The HPIX has shown greater swings in value than the Tech 100. Share prices of smaller and younger companies can be more volatile than share prices of larger companies in the same sector. However, since the start of 2020, the HPIX and the Tech 100 have ended up recently in about the same place in terms of cumulative change.

### Are InsurTechs tech stocks or insurance stocks?

One of the most common questions in InsurTech is whether such companies are insurance companies or technology companies. The HPIX may help illustrate how InsurTechs have traded.

- After last year’s 75% rise in the HPIX, in 2021 year-to-date, the HPIX is down 8%. Many “traditional” insurance stocks have risen this year. See [here](#) for an example to contrast.
- Larger tech stocks have outperformed the HPIX this year. Year to date, the HPIX is down 8% while the Tech 100 is up 9%.
- The HPIX may recently have been trading more in line with shares of other relatively young tech companies ([for example](#)) rather than large tech shares represented by the Tech 100.

As always, past performance is not a guarantee of future results.

### Future of the Index

The Index is constantly updated during normal market trading hours. It can be accessed in several ways including on Bloomberg (HPIX) and [online](#). (Note that the online version intraday is displayed in Central European Time – the time zone of the calculation agent.) We intend to write more about the Index as it matures. In the meantime, we hope that you find the Index useful for understanding the performance of InsurTech in the public markets.

## Disclaimer

Unless noted, all data in this article are as of US market close on April 27, 2021. Figures may be rounded to the nearest whole number.
